

Reuse cliff: the threshold counts requests, not tokens

Layer 2 = 8 outer slots x 8,192 tokens, FIFO. 2,000-token requests, 12/12 reproduced (measured)

- measured - layer 2 actual reuse (FIFO, 8 slots)
- prefix_cache_hits_total (layer 1, LRU 512)
- ablation (model): LRU, block-granular reclaim, by request size
background requests arriving during the gap, B
